

READINESSOPS | GOOGLE CLOUD TECHNICAL BRIEFING

ReadinessOps

From changing evidence to governed agent execution

Evidence • Reassessment • Human decision • Published boundary • Protected action

Technical briefing deck

August 2026

Google Cloud services, state transitions, identity boundaries, and validation invariants

SOLIFAN

Turn changing evidence into an auditable permission lifecycle

CONTROL CONTRACT

SYSTEM INVARIANTS

- AI output remains a proposal; it cannot approve, publish, reactivate, or execute.
- Only Explicit Publish changes the official Current state and active Delegation Boundary.
- Protected execution is evaluated deterministically and revalidated by a separate identity.

The product governs how changing evidence becomes permission to act — not only what the model recommends.

Four responsibility domains connected by one governed trace

ReadinessOps — Governed Agent Control Plane

Evidence-driven reassessment · Human-published delegation boundaries · Identity-isolated execution

Evidence changes. Human publication defines the official state. Published boundaries govern execution.

Map operational responsibilities to Google Cloud control points

Responsibility	Implemented control	Google Cloud evidence
01 Input safety	Pre-LLM screening and authenticated event processing	Model Armor + private Cloud Run Worker
02 Evidence-driven reassessment	Evidence Impact first; then parallel specialists and synthesis	Cloud Storage + Pub/Sub + Vertex AI Agent Runtime
03 Official governed state	Versioned Current kept outside model conversation context	Firestore governed records + one Trace ID
04 Human authority	Review, boundary editing, approval, and Explicit Publish	Governance Workspace + IAP + audit events
05 Protected execution	Deterministic gate and runtime identity isolation	Agent Gateway + Identity A / Identity B + Pub/Sub

Separate evidence, proposal, publication, Current, and execution claims

EVIDENCE + SAFETY	ANALYSIS + PROPOSAL	HUMAN AUTHORITY	EXECUTION + AUDIT
Evidence object	Four Decision Packs	Human review	Current state
Evidence event	Proposed boundary	Boundary edit	Action request
Model Armor result	Grounding status	Approval decision	Gate outcome
Governed revision	Proposal state	Explicit publication	Execution claim
Evidence Impact	Source trace	Versioned boundary	Audit event

Presentation surfaces: Governance Workspace for controlled changes | Judge Console for read-only state, trace, architecture, and identity proof

Establish Evidence Impact first, then reassess in parallel

EVENT Cloud Storage OBJECT_FINALIZE | authenticated Pub/Sub delivery | private Worker

OUTPUT CONTRACT

FAILURE BOUNDARY

- Malicious input: BLOCKED; no Revision and no model processing.
- Invalid schema, grounding, or citation context: proposal is not persisted as official state.

Separate AI proposal, human decision, publication, and READY activation

GOVERNANCE STATE MACHINE

WRITE AUTHORITY

Version the governed Current state outside model conversation context

PUBLISHED CURRENT

Agent	readiness status / target agent
Current State	proposal / publication / revision / boundary version
Published Boundary	machine-readable permission dimensions
Execution history	last executed / last denied action

NEW REASSESSMENT

Evidence Event	new object / material change
Revision	Evidence Impact and source context
Proposal	Decision Packs + proposed boundary
Human Decision	review / edit / approval
Publication	only transition that replaces Current

ONE GOVERNANCE TRACE ID Evidence Event → Revision → Proposal → Human Decision → Publication → Action Request → Executor → Protected Action

Current is frozen during proposal work. Only publication replaces it; prior versions remain attributable and auditable.

Enforce the published boundary with deterministic gates and isolated identities

REQUEST CONTEXT

IDENTITY ISOLATION

Separate governed changes from independent verification

ReadinessOps — Governed Agent Control Plane

Two operational surfaces: human governance in the Workspace, independent proof in the Judge Console.

Governance Workspace

Review, publish, and enforce delegation boundaries.

ReadinessOps — Governance Workspace

Use changing evidence to review, publish, and enforce AI delegation boundaries.

Case Triage Agent: READY

Refresh workspace

okada.shing@solid-fdn.co.jp

Live state loaded

Evidence — Automatic reassessment — Human review — Explicit publication — Governed execution

1 • Add Evidence

Evidence label: workspace-safety-change

Paste text evidence: Describe the new evidence that may change the agent safety basis.

Or upload a UTF-8 .txt file: Choose .txt file | No file selected

Upload and reassess

Reassessment completed: A new governed revision and proposal were created. Next: review the refreshed proposal and Decision Packs. ▶ Technical details

Model Armor runs before Revision or LLM processing. Safe evidence is processed asynchronously by the private worker.

2 • Reassessment

Agent: Case Triage Agent

Readiness: READY

Latest event: COMPLETED

Material change: MATERIAL + SUSPEND

Proposal: PUBLISHED / PUBLISHED

Trace: GCS_083b21eaf05ea02d33b3d47b6

Four Decision Packs

governance
CRITICAL

model routing
Because the previously verified mandatory validation control protecting autonomous standard-case routing is no longer active, the agent cannot safely execute general autonomous routing. Routing authority is downgraded to drafting recommendations or restricted to a reduced boundary.

portfolio
HOLD

value realization
The validation controls protecting both hardship-case resolution and autonomous standard-case routing are inactive, meaning that live value realization metrics are entirely unmeasured and unvalidated. Autonomous routing must remain suspended to prevent unmitigated errors.

3 • Human Decision

Review comment: Reviewed in Governance Workspace. Automation may resume only within a reduced low-impact scope.

4 • Governed Execution

Action: route_standard_case

Tool:

Judge Console

Inspect state, audit history, architecture, and identity isolation.

ReadinessOps — Judge Console

Evidence-driven governance and identity-isolated execution on Google Cloud.

Refresh governed state

Run Analysis Identity A probe

Live governed state loaded

Governed recovery path: Evidence change — Automatic SUSPEND — Human review — Explicit Publish — READY in reduced scope

1 • Fleet State

Agent	Case Triage Agent
Readiness	READY
Current State	Published boundary active
Boundary Version	4
Trace ID	GCS_083b21eaf05ea02d33b3d47b6

2 • Evidence & Reassessment

Evidence Event	GCS_083b21eaf05ea02d33b3d47b6
Event Status	COMPLETED
Material Change	MATERIAL + SUSPEND
Security Gate Test	No malicious input detected
Decision Packs	governance + value_realization + model_routing + portfolio

3 • Human Decision

Proposal	Evidence-driven reassessment
Proposal Status	PUBLISHED
Approval	Recorded separately from publication
Publication	Explicit publication recorded
Permitted Actions	
Prohibited Actions	route_hardware_case_to_human_review, automated_hardware_resolution, modify_customer_account, financial_transaction, automatic_routing_of_non_synthetic_or_medium_high_impact_cases

4 • Governed Execution

Executed Action	
Execution Status	
Pub/Sub Message	
Denied Automated Action	route_standard_case
Outside automated boundary — manual handling required	

Live Analysis Identity A proof

Analysis identity isolation

Run the probe to verify that Analysis Runtime A cannot execute protected actions.

SOLIFAN | READINESSOPS

Lock the production path and verify state, identity, and execution invariants

VALIDATED PRODUCTION ENVIRONMENT

Project	readinessops-agent-governance
Region	asia-northeast1
Governance Runtime	8540236666424524800
Evidence Worker	readinessops-evidence-worker
Workspace	readinessops-workspace
Judge Console	readinessops-judge-ui
Evidence bucket	readinessops-evidence-649947189508
Pub/Sub ack deadline	180 seconds

VERIFIED INVARIANTS

- Material evidence transitions READY → SUSPENDED.
- AI output remains REVIEW_REQUIRED / NOT_PUBLISHED.
- Approval leaves Current unchanged; Explicit Publish changes it.
- READY activation fails closed against an unpublished newer revision.
- Outside-boundary action is DENIED.
- Within-boundary action is PERMITTED and EXECUTED through Identity B.
- Analysis Identity A returns DENIED / HTTP 403.
- Workspace and Judge read the same Firestore governed state.

AI publish paths

From model output to governed agent operations on Google Cloud

IMPLEMENTED

- Event-driven evidence ingestion and Model Armor safety screening
- Evidence Impact → parallel specialist reassessment → synthesis
- Schema-constrained proposal and deterministic grounding validation
- Human Review, boundary editing, approval, and Explicit Publish
- Versioned Current state, timeline, audit, and one governance Trace ID
- Deterministic DENIED / PERMITTED outcomes and Identity B execution
- Governance Workspace, read-only Judge Console, and IAP access

KNOWN CONSTRAINTS / NEXT HARDENING

- Synthetic text evidence only; no production customer connectors
- General-purpose PDF ingestion not included in the submitted build
- Single demo agent and no tenant-isolated product control plane
- ROI and policy accuracy not yet validated in a customer pilot
- Versioned history is not storage-level immutable
- Broader RBAC, retention, monitoring, rollback, and tenant isolation remain
- AI auto-approve, auto-publish, auto-reactivate, and direct execution are intentionally excluded

Result: a Google Cloud control plane that turns changing evidence into human-published delegation boundaries and enforceable execution permissions.
